

The product logic

The assistant turns a resident need and location into a practical referral path.

The interface starts with the resident's problem, then uses place and program data to narrow the next step.

1

Need

Internet, skills, or devices

2

Place

Confirm the resident's location

3

Match

Surface relevant local options

4

Referral

Review providers and next steps

Design principle

Start with the resident's problem, not the structure of the underlying data.

Guardrail

The tool supports referrals. Providers confirm availability and eligibility; staff retain judgment.
