

The studio

Tech & Society Studio.

Custom digital products. Expertly built.

We turn public-interest expertise into custom digital tools for the people who put it to work.

→ Built around people.

Our mission

Make expertise useful.

We pair policy and program expertise with data, design, and development to build tools around your decisions, users, and operating realities.

Custom fit.
Not off the shelf.

Expert-led.
From discovery onward.

Quality.
Tested against
agreed criteria.

\$1.5B+

New York ConnectALL

Investment supported by HR&A
as lead strategic advisor and
program manager.

39

Rhode Island municipalities

Land-use datasets standardized
with state planners and Go
Consulting Services.

>35%

U.S. population

Served by HR&A's broadband
and digital-opportunity
clients.

Program scale, not product impact.

Our advantage

Expertise **before** code.

We design digital tools from the realities of policy, service delivery, and public-interest operations.

Public-interest fluency

Broadband, digital equity, policy, and service systems.

Product thinking

Decisions, workflows, and user tasks.

Data design

Definitions, stewardship, validation, and updates.

Technical delivery

Modern frontend, accessibility, QA, and secure implementation.

Working digital products for real-world use.

Our methodology

Understand. Build. Prove.

An expert-led delivery approach: agree the problem, build with domain experts, and validate before handoff.

01

Understand

People + purpose

Map user tasks, source data, and constraints.

02

Build

Data + design

Prototype a workflow around your program.

03

Prove

Experts + users

Test priority tasks; assign update ownership.

Usability

How we build

Quality is a design decision.

Useful tools depend on strong data design, careful QA, and accessible, responsible implementation.

The data foundation

Records

source the right evidence

Definitions

structure a usable model

Checks

validate with expert judgment

Updates

assign named ownership

The build standard

Accurate

source checks and expert review

Accessible

keyboard, screen reader, contrast

Responsible

privacy, security, clear limits

Useful

real tasks and user testing

Responsive

works across desktop, tablet, and phone

Maintainable

clear ownership and update paths

Accessibility is tested, not assumed.

Our solutions

Proven product patterns. Adapted to your context.

Guided service navigation

Connect residents or staff to the right local resource.

Ecosystem intelligence

Understand organizations, relationships, and service networks.

Decision-support dashboards

Organize evidence for planning, coordination, and action.

Not a template. A starting pattern customized to your people, evidence, and operating model.

Case study

A clearer way to connect.

Guided service navigation | Clark County Digital Equity Assistant

The assistant helps county staff and partners find internet, training, and device resources for residents.

Internet

Skills

Devices

Responsive web product

English / Español interface

THE PRODUCT LOGIC

From a resident's need to relevant support.

The assistant turns a broad service problem into a short, legible path staff can use in real time.

WHY IT WORKS

It reduces the search burden.

Staff start with the person's need and place, then move toward a practical referral.

Guardrail The tool supports referrals. Providers confirm availability and eligibility; staff retain judgment.

THE FRONTEND EXPERIENCE

A task. A place. A next step.

The interface is organized around the work staff need to do, rather than around the structure of the underlying data.

1

Start simply

Three clear entry points:
internet, skills, or devices.

2

Make it local

An address guides the search
toward relevant local resources.

3

Move forward

Show options and provider
contacts that support a referral.

4

Design for access

English / Español plus one
responsive web experience.

Product principle: make the next action obvious without pretending the tool can make the final decision.

FROM ONE PRODUCT TO A REUSABLE PATTERN

Your context. Not a template.

The value is the pattern: guided intake, contextual filtering, curated options, and a human-in-the-loop handoff.

What stays consistent

- A clear task-based starting point
- Structured data behind the interface
- Context filters such as place or service type
- Accessible, responsive frontend patterns
- Clear limits and human judgment at the end

What gets customized

- Users and service workflows
- Categories, questions, and terminology
- Data sources, geography, and rules
- Languages, branding, and interface details
- Ownership, update cadence, and QA criteria

A reusable solution pattern for service navigation, adapted by experts to the client's people, evidence, and operating model.
